PROFESSIONAL SUMMARY

Final-Year B.Tech Artificial Intelligence & Data Science undergraduate (CGPA: 8.52) with hands-on experience in full-stack development, backend engineering, and AI integration. Built SmartFood AI — a production-grade food delivery platform with 4 user roles, 35+ REST APIs, JWT security, and Docker CI/CD deployment. Strong foundation in Data Structures & Algorithms (252+ LeetCode problems, 100 Days Badge), Object-Oriented Programming, Operating Systems, Computer Networks, and Distributed Systems. Focused on writing scalable, secure, and well-architected software.

TECHNICAL SKILLS

Languages	Java, Python, SQL
Backend	Spring Boot 3, Spring Security, REST APIs, JPA/Hibernate, Flask
Frontend	React 18/19, Vite, React Router, Axios
Database	MySQL 8, JPA ORM, HikariCP Connection Pool, Flyway Migrations
DevOps	Docker, Docker Compose, Nginx, GitHub Actions CI/CD, Spring Actuator
AI / ML	Google Gemini API, BERT (Hugging Face), NLP, Streamlit
CS Fundamentals	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Network Security, Distributed Systems
Tools	Git, Postman, Figma

PROJECTS

SmartFood AI — Full-Stack Food Delivery Platform

Spring Boot · React · MySQL · Docker · JWT

- Architected a multi-role platform (Customer, Restaurant, Delivery, Admin) with 35+ REST APIs handling concurrent order processing, demonstrating real-world distributed system design.
- Implemented layered security: JWT authentication, Spring Security RBAC, BCrypt password hashing, and Bucket4j rate limiting — applying network security and access-control principles.
- Integrated Google Gemini AI for personalized food recommendations; deployed the full stack with Docker Compose, Nginx reverse proxy, and GitHub Actions CI/CD pipeline.
- Applied HikariCP connection pooling and JPA ORM for optimized database access, Flyway for schema versioning — mirroring production-grade DB management practices.

Emotion Detection System — NLP & Deep Learning

BERT · Python · Hugging Face · Streamlit

- Built a text-based emotion classification model using a fine-tuned BERT transformer, categorizing input into emotions.
- Designed an NLP preprocessing pipeline (tokenization, embeddings, classification) and deployed an interactive real-time demo via Streamlit.
- Demonstrates applied understanding of ML model pipelines, NLP techniques, and AI-assisted tooling — directly relevant to AI-enabled engineering workflows.

EquiVal — Fair Property Price Estimator

Spring Boot · React · MySQL · JWT

- Built a full-stack property valuation system featuring JWT authentication, RBAC, and RESTful APIs; applied DBMS concepts for structured data storage and relational query design.
- Developed real-time property valuation, estimation history management, and 10-year growth forecasting using algorithmic modeling on structured datasets.

EDUCATION

B.Tech — Artificial Intelligence & Data Science

J.J. College of Engineering and Technology, Trichy

2023 – 2027

CGPA: 8.52
